

BEDBUGS

Bedbugs are troublesome household pests. They're tricky, hard to find, and can create potential health risks for you and your family.

They will hide in suitcases, boxes, and shoes to be near a food supply. They are night-time creatures. They can hide behind baseboards and in cracks, crevices, and folded areas of beds, bedding and adjacent furniture, especially mattresses and box springs. Bed bugs can also hide in electrical switchplates, picture frames, and wallpaper and nearly anywhere inside a home, car, bus, or other shelters. Bed bugs usually come out at night for a blood meal. Bed bugs do not transmit diseases, but after choosing blood your skin becomes itchy & red. After feeding, they move to secluded places and hide for 5-10 days. During this time in the bed bug life cycle, they do not feed but instead digest their meal, mate, and lay eggs.

We have spraying treatment on Bedbugs.

This treatment takes around of 2 hrs for 400-500 Sq.ft area.

This treatment is not a one-time activity or only infected area must be treated but also require whole area or whole flat require to be treated as chances of spread of multiple bed bugs. Also, an egg of bedbugs is resistant to chemicals, as their eggs have a hard coating which protects them from the insecticide. Bedbugs eggs hatching period is 12-15 days, that's why Bed bugs pest control treatment has to be repeated after 12-15 days interval for complete relief by eradicating the second generation also.
