

Lizards & Other

Reptile family includes all crawling species like Lizards, Worms, and Snakes etc. Lizards are the most common Reptile family occurs at homes. Lizards are commonly found in Gardens, Homes, ponds, buildings, outside buildings walls, trees etc.

They are harmful to humans rather all creatures are somehow dangerous to the human being. Lizard is one of them. They don't bite but they secrete toxic secretions out of their body that can be serious in numerous ways. If a lizard falls into any food item, the chances are that it will become poisonous; it is advised to avoid such food items that get infected. These toxic foods are extremely dangerous. Not all but some lizards have found to be dangerous because of the presence of salmonella bacterium. There are many types of Lizards.

Treatment:

We at Swami Samarth Pest Control have the best treatment to overcome Lizards problems. Lizards are active during night time and attracted towards the light; the reason behind this is to eat insects so we do treatments mostly late hours when they become active. The treatment is carried out by spraying insecticide on walls, in every crack and crevice of the premises to reach all the hidden parts.

Cover all utensils, containers with old clothes to avoid any contamination. Leave the place undisturbed or do not wipe the floor after pest control as hidden insects may come after some time and die. It will take 2-3 days for killed hidden insects like Lizards.

We recommend 3 services in a year for homes and 4 services in a year for offices. Inspection is a must before treatment to get an idea about the severity and accordingly we recommend service.
