

MOSQUITOES

Mosquitoes found everywhere specially at pond site, lake site where they get warm & humid conditions to grow. These wet conditions are very fruitful for breeding of mosquitoes; ample of mosquitoes grows and fly everywhere. They spread the diseases like Malaria, Dengue, and Chikangunia.

It is important to understand complete reduction of mosquitoes is impossible but you can reduce or control on sources which are responsible for spreading of mosquitoes.

How we can control on production of mosquitoes?

We can control on mosquitoes spread by cleaning drain water regularly, changing water in bird baths, filling or draining puddles, marshy areas, and tree stump. Eliminating such mosquito breeding areas can be an extremely effective and permanent way to reduce mosquito populations without resorting to insecticides. Cleanliness & humid free housekeeping is very important to reduce breeding of mosquitoes and it shall be more effective than any other techniques to control on mosquitoes.

How we can help you?

We at Swami Samarth Pest Control providing two types of services:

SPRAYING

In this treatment, we spray a colourless and odourless insecticide on the walls. This insecticide is harmless for human beings. The mosquitoes sit on the wall, come in contact with the insecticide and die. This is a one-time service with expected efficacy of one month.

FOGGING

In Fogging treatment mosquitoes can't fly forwards due to fogging. During morning time and afternoon time is effective for fogging treatment.

Annual Maintenance Contract

Regular control & prevention sources of breeding of mosquitoes are the most powerful techniques for control of mosquitoes. Maintenance & scheduling of control on mosquitoes shall be powerful tool to prevention of spread of mosquitoes.
